VersaPulse PowerSuite

VERSATILE SYSTEMS FOR MULTIPLE APPLICATIONS

of One

# Powerful Solutions

The VersaPulse PowerSuite family of lasers is a powerful solution for your clinic or hospital. Although they are best known for their urological applications such as, BPH, stones, tumors and strictures, they are also effective for applications in a variety of other specialties including: ENT, gastroenterology, orthopedics, general surgery and more. This flexibility provides a solid investment for the future.

# Support for the Future

Lumenis is committed to providing a solid foundation for your success by delivering quality products, training and service. We start by building quality products based on years of experience. We follow that up by providing world-class training and preceptor programs with leading experts and institutions. All this combined with our team of fully-trained certified service professionals provides you with the support you need today and tomorrow.

MAKING A DIFFERENCE FOR YOU AND YOUR PATIENTS

# The A

"Selection of the appropriate wavelength and power capabilities can maximize surgical efficiency and minimize unwanted side effects. Holmium laser energy is highly absorbed by water, has limited penetration depth and possesses a number of unique characteristics. Because of holmium's primarily photothermal mechanism, it is the instrument of choice to fragment stones endoscopically. Importantly, at high power the holmium laser also cuts and vaporizes soft tissue, which led to its natural application for treating soft tissue for BPH treatment. By simultaneously cauterizing tissue during incision or vaporization, the holmium laser minimizes blood loss, causes no collateral tissue damage and enables quicker recovery than traditional surgery. The precision and versatility of the PowerSuite make it an essential tool in my OR."

## James Lingeman, MD

Clinical Professor of Urology,  
Urology Department, Indiana  
University School of Medicine

"We have used the VersaPulse PowerSuite holmium laser for over 10 years at Duke, and it's the most versatile, multifunctional surgical tool in my OR. PowerSuite is well suited for treating a wide range of urology conditions from urinary stones, tumors, and strictures to BPH. I've found the holmium laser ideal because of its versatility, precise tissue penetration and excellent hemostasis effect. We have been able to manage patients with reduced blood loss and even treat patients who are on anticoagulants. The lack of collateral tissue damage enables a quick turn to normal activities. I believe that our patients have greatly benefited from this state-of-the-art technology and we consider high power holmium an essential technology for managing urology patients."

## Glenn Preminger, MD

Professor of Urologic Surgery; Director of Duke  
Comprehensive Kidney Stone Center, Duke  
University Medical Center, Division of Urology
